Grove City, Ohio 43123-1278 DOT CT0097	Work Order # 096	8 74
V/ K/ K-EPA 27/_	External Visual Inspe Leakage Test / Inspe Annual Certification Method 27 - 63.425	ction Test
Customer SSA Transport Inc. Address 101 E South SF. C.S.Z. Rockford Objo 45882	Owner Same	
License Plate # TQZ 91660. Owners Unit # 700 V Serial # 35 3400 Trlr. Vin # (If Applicable) IPMA 2447/35003400 P.O.T. Spec # D07 406 AL Original Test Date 10-02 Design of MAWP, 3,3 Test Location (C.S.) Pockford, Ohio	vious Test Dates 10-72 10-72 10-22 10-22 EPA 27 10-22 unber of Compartment	
Compartment Size: #1 3500 #2 2006 #3 1100	•	
Year Tank Mfg. 10-02. Mfg. Name Polar Trailer	Gallons_9300	
Minimum Thickness Of Cargo Tank Shell . 173 Heads . 2	20	
Is Tank Lined? Insulated? Is the unifused for transport of any material other than petroleum	based products?	<u>D</u>
External Visual Inspection 18	30.407 (d)	
	Faulty	Okay
1.) External Inspection Of Tank Shell And Heads: A) Corroded or Abraded Areas (Rust) B) Dents of Punctures C) Distortion of Defects In Welds D) Thickness Testing Needed E) Tank has Imaging Decals (Wrap) Internal Visual In Accordance To 180.407(e)	YES YES	/
 External Inspection Of Piping, Valves. Gaskets: A) Corroded Areas B) Defects in Welds, Signs of Leakage C) Condition of delivery, vapor hoses 		<i></i>

3) External Inspection Of Manholes: A) Devices for tightening manhole covers operative B) Evidence of leakage C) Inspect and pressure test fill lids, normal vents 4) External Inspection Of Emergency Valves And Devices A) Emergency valves free from corrosion, erosion, distortion, or external damage that would prevent safe operation B) Remote trip control in operation / activate C) Leakage test seating disc in emergency valve D) Self closing stop valves in operation - function 5) Missing, bolts, nuts, and fusible links must be replaced and loose nuts - bolts tightened 6) All Required Marking On Tank Legible A) DOT spec. plate accessible / legible B) Flammable placards legible (all 4-sides) 7) External Inspection Of All Major Appurtenances A) Fifth wheel plate, pins, bolts B) Suspension, springs, hangers, etc. C) Frame, cross members, gussets, etc. 8) Inspect all re-closing pressure relief valves 9) Lights, reflectors, wiring in good working order 10) Brakes in good working order 11) Air hoses above axles, chambers, chafed, or rotted 12) Air system have any leaks 13) Tank mounting bolts, boards, attachments in proper working order		(VKE) REVISION Work Order#_69	
3) External Inspection Of Manholes: A) Devices for tightening manhole covers operative B) Evidence of leakage C) Inspect and pressure test fill lids, normal vents 4) External Inspection Of Emergency Valves And Devices A) Emergency valves free from corrosion, erosion, distortion, or external damage that would prevent safe operation B) Remote trip control in operation / activate C) Leakage test seating disc in emergency valve D) Self closing stop valves in operation - function 5) Missing, bolts, nuts, and fusible links must be replaced and loose nuts - bolts tightened 6) All Required Marking On Tank Legible A) DOT spec. plate accessible / legible B) Flammable placards legible (all 4-sides) 7) External Inspection Of All Major Appurtenances A) Fifth wheel plate, pins, bolts B) Suspension, springs, hangers, etc. C) Frame, cross members, gussets, etc. 8) Inspect all re-closing pressure relief valves 9) Lights, reflectors, wiring in good working order 10) Brakes in good working order 11) Air hoses above axles, chambers, chafed, or rotted 12) Air system have any leaks		Faulty	Okay

(VKE) REVISION 11/21 (pg3) Work Order #<u>09667</u>4

Leakage Test 180.407 (h) Pneumatic

Each cargo tank with all valves and accessories in place or operative must be tested at not less than 80% of the tank design pressure or maximum allowable working pressure (MAWP) whichever is marked on the certification plate.

WET TEST CERTIFICATION FORM

This document certifies that this trailer testing has been completed and has passed the wet test requirement for overfill protection probes. This certifies that the entire operation of the truck overfill prevention system is wired correctly and that the entire system is working properly.

The trailer noted below meets the requirements for the overfill probes to be set where the maximum safe fill is at least sixty (60) gallons less than the manufacturers specified compartment capacity.

PROBES TESTED AND SET PROPERLY

	Certified Inspection Rec	uirements	All Boxes M	ust Be Co	mpleted			YES
Has the overfill protection probe been set & tested to a minimum of 60 gross gallons below the maximum compartment capacity? Is the overfill protection system in working condition? Has each compartments probe been tested with liquid to verify that it activates the shutdown circuitry? Has the grounding system been checked and is in proper operating condition? Has the grounding system been checked to ensure that has not been modified or rewired in any manner that would allow it to provide a false reading to allow loading? Are all gauge rods and any other compartment protrusions properly grounded with secure bonding wires? Is a functional brake interlock system installed on the loading header and vapor recovery hose?
