11) Air hoses above axles, chambers, chafed, or rotted		X
12) Air system have any leaks	X	
13) Tank mounting bolts, boards, attachments in proper working order		X
14) Leakage test entire pump system(s)		NA

(VKE) REVISION 11/21 (pg3) Work Order # 104165

Leakage Test 180.407 (h) Pneumatic

Each cargo tank with all valves and accessories in place or operative must be tested at not less than 80% of the tank design pressure or maximum allowable working pressure (MAWP) whichever is marked on the certification plate.

2. Has each compartment probe be	een tested to verify it activates	the shutdown circ	cuitry on 1	this unit?				
3. Has the grounding sytem been comanner?	hecked to ensure it is in workin	g condition and h	as not be	en modifie	d or rewired i	n any		
4. Has the grounding system been	tampered with to allow a false	reading to permit	loading?			Ī		1
5. Are all gauge rods and comparts	nent protusions grounded with	secure bonding w	/ires?			ļ		
6. Has a brake interlock system bee	n installed on the loading head	ler and vapor reco	very hos	e?		•		
This document certifies that this trailer testing has been completed and has passed the wet test requirement for overfill protection probes. This certifies that the entire operation of the truck overfill prevention system is wired correctly and that the entire system is working correctly. The trailer noted meets the requirements for the overfill probes to be set where the maximun safe fill is at least sixty (60) gallons less than the manufacturers specified compartment capacity. The carrier certifies that all DOT inspections, stickers, decals and DOT 396/17 data is current for this trailer. An emergency response guidebook is on board and the vehicle has compartment capacity / strapping charts that are current and available upon request. Max Compartment Capacities

Buckeye Annual & Post Incident Trailer Inspection Form

This form must be completed each year or following a rock out on each trailer and provided to each facility utilized by this equipment. This form shall accompany the federally required annual pressure-vacuum test or Distillate Only Loading Certification and as such any equipment without either shall be automatically be locked out from the loading system if no renewal is provided on or before the anniversary date.

Certifled Inspection Company Verification Requirements

Wet Test Certification

The Overfill Protection Probe system has been inspected and is in operating condition. The process should test the probe of each compartment with a liquid to verify it activates the shuldown circuitry.

Ullage Certification

Overfill Protection Probes are at such a height to allow for 60 gallons of ullage prior to reaching the compartments maximum volume.

Grounding System Certification

The Grounding system has been checked and is in proper working condition, AND has not been modified in any way to provide a false reading allowing the trailer to be loaded.

Brake Interlock Certification

A brake interlock system is installed and functional on the loading header and the vapor recovery hose connection.

MC 366 / DCT 496 Certification

The unit has passed the inspection and is released for return to service.
